

Comshel™ Shelters - Ultimate Protection for Harsh Weather

Introduced in 1968 Sinclair's Comshel™ Communication Shelters have been used for more than 40 years to protect communication systems from hostile environments in remote locations. These shelters are ideal for use on mountains, forests, deserts and other rugged terrains. Proven to withstand strong winds and radial ice build-up, these units offer maximum protection for expensive communication equipment.

The basic composition of the Comshel™ is fiberglass roving with cloth and mat as reinforcement for a thermoset resin. The Comshel™ consists of a smooth gel-coated surface and round design that sheds ice, as well as rock anchors that help withstand high winds.

Currently there are over 500 units in use in B.C, Alberta and the North Western Territories. Typical users include:

- Government – Forestry
- Government – Transportation
- Public Safety
- Telcos
- National Parks
- Oil and Gas operations
- Logging/Timber operations
- Seismic Monitoring
